

**Title:** Director of Information Technology

**Location:** New York City

**Department:** Enterprise Infrastructure & Security

**Job Summary:**

The Director of Information Technology is responsible for leading enterprise-wide technology operations, cybersecurity programs, cloud transformation initiatives, and IT service delivery across all business units. This role oversees systems administrators, network engineers, help desk teams, and cloud architects while ensuring compliance with industry standards and regulatory frameworks.

**Key Responsibilities:**

- Lead IT teams responsible for networking, cloud platforms, identity management, and enterprise systems.
- Manage Azure, Microsoft 365, and hybrid cloud infrastructure.
- Oversee Active Directory, MFA, SSO, endpoint hardening, and system patching operations.
- Implement disaster recovery, incident response, and business continuity plans.
- Partner with executives to align IT strategy with organizational goals.
- Manage vendor contracts, software licensing, and annual IT budgets.
- Ensure security compliance with NIST, CIS, HIPAA, and SOC frameworks.
- Monitor KPIs related to SLA performance, uptime, and cybersecurity metrics.
- Direct modernization projects including virtualization, automation, and cloud migration.

**Required Skills & Experience:**

- 7+ years in IT management or senior systems administration.
- Expertise in Azure, AD, networking, virtualization, PowerShell, and security operations.
- Strong leadership, communication, and project management experience.
- Certifications preferred: CISSP, Azure Administrator, ITIL, Security+, CCNA.

**Desired Qualifications:**

- Experience managing distributed teams across multiple global locations.

- Familiarity with DevOps tooling and zero-trust architectures.
- Prior experience working in high-growth or regulated environments.
